[Mango stops growth of colon, breast cancer cells in lab](#)

Posted at: 8:55AM, 01/20/2010

In a new study conducted by Texas AgriLife Research, researchers tested the effects of polyphenol extracts from five different types of mangoes on cancer cells in the laboratory. Dr. Susanne Talcott, who together with her husband Dr. Steve Talcott, conducted the study on cancer cells, found that mango polyphenol extracts slowed down the growth of prostate, lung, and leukemia cancer cells.
