

MANGO CROP REPORT

Updated February 16, 2018

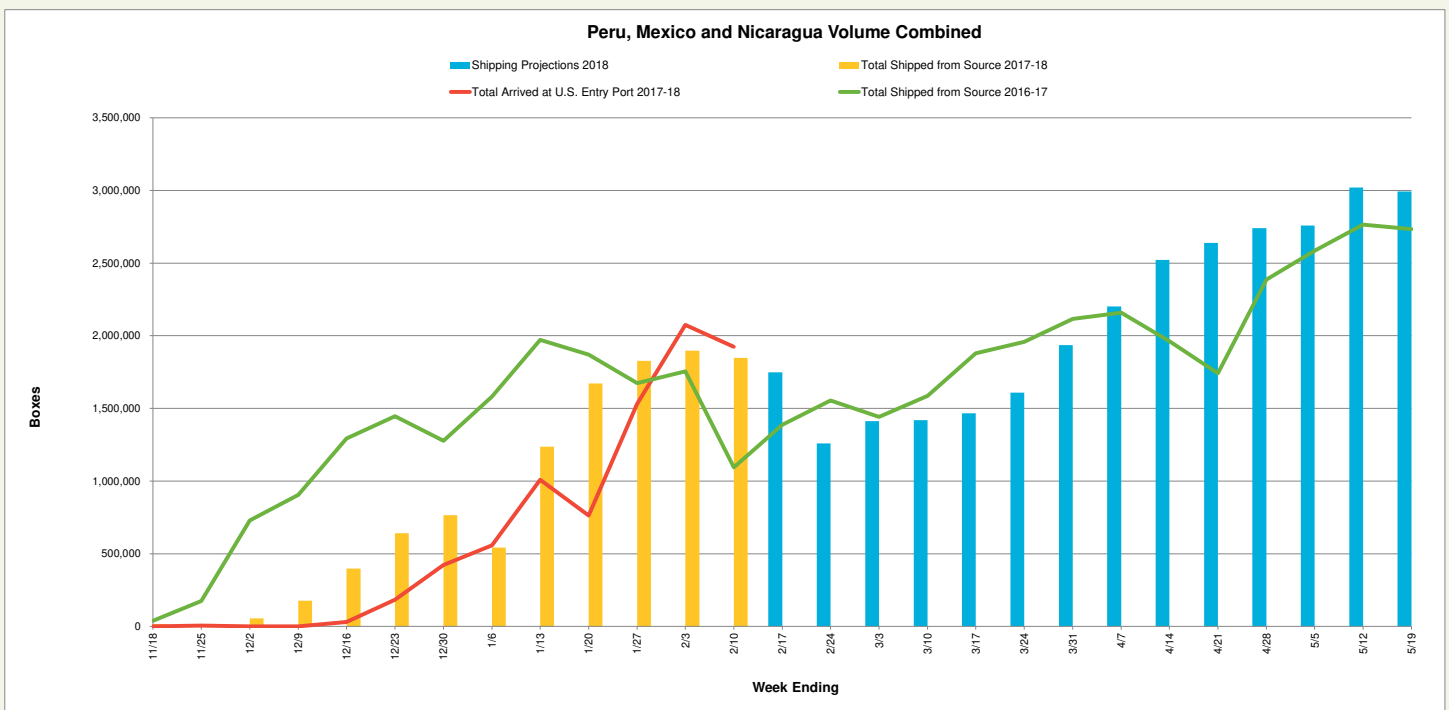

The Mango Crop Report is updated regularly and can be found at mango.org/crop.

Peru, Mexico and Nicaragua Crop Information

- **EXPORTING REGIONS:** The Peruvian season peaked at the end of January and early February and is winding down rapidly over the next 3 weeks. Mexico began their exports in mid-January, and currently the states of Oaxaca, Chiapas, and Michoacán are harvesting and packing. Nicaragua and other Central American countries will be initiating their export season in the next couple of weeks
- **VARIETIES:** The only variety out of Peru for the remainder of their season is Kent. Currently, the main varieties from Mexico are Honey/Ataulfo at 94%, with some Tommy Atkins at 6%.
- **SIZING:** The current sizes for Mexican Honeys/Ataulfos are 13-15, followed by 16-17, 18, and 20; and some 12 and 22-23. The most common Mexican Tommy Atkins sizes are 10; followed by 12 and 9; some 8 and 7; and very few 6 and 14. (See page 8 for the full chart)
- **VOLUMES:** total weekly shipped volumes are projected to come down over the next two as Peru finishes its season, and volume to remain around 1.4 million boxes/ week through mid-march, then increase steadily to 3 million boxes/week by mid-May. (See pages 2, 4 and 7 for more details)

Mango volume shipped on week ending 2/10/18 was approximately 1,846,674 boxes.

- During the same week last year, volume shipped was approximately 1,054,244 boxes.

Please note: U.S. entry ports report incoming mango volume on different schedules; some report daily and some weekly. This will cause discrepancies between the volume shipped from the source and the volume arrived at the U.S. entry ports in any given week.

Dates are week-ending. For Shipping Projections and Volume Shipped from Source, allow 2-3 weeks from Peru, and 2-5 days from Mexico, and 5-7 days from Nicaragua for arrival at U.S. Ports.

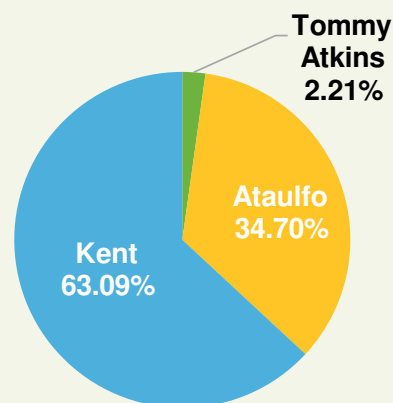

All projections will be adjusted throughout the season.

Peru Crop Information

- The Peruvian season began in November and will run until the last week of March with a projection of approximately **11.9** million boxes.
- Peru's main varieties are Kent (97%) and Other (3%).

Volume on week ending 2/10/18

- Volume shipped from Peru was approximately **1,136,673** boxes for a total of **9,519,637** boxes for the season.
 - * During the same week last year, volume shipped from Peru was approximately 670,712 boxes for a total of 14,623,038 boxes.
- *The NMB is aware of the discrepancy between the "Total Shipped from Peru in Boxes" and "Total Arrived at U.S. Entry Port in Boxes" in the graphs and table below, and is working with USDA-AMS to correct and update the information as it becomes available.*

Price information is found on pages 10 and 11.
